

RESUME

Name : SUJAN KS
Address : Kanyana, Bantwal, Dakshina Kannada, Karnataka
Contact : +91-9108262847
Date of Birth : 09/07/2005
Portfolio : <https://port-folio-sujan.vercel.app/>
Email : sujankswork@gmail.com
Github : github.com/Sujan-lab-cell
LinkedIn : linkedin.com/in/sujan-k-s-a41261321

EDUCATION

N.M.A.M. Institute of Technology Nitte, Karkala India
Artificial Intelligence and Machine Learning
CGPA : 8.56

2023–2027

PROJECTS

GeoSentinel – Autonomous Vision-Based Landslide Monitoring System [GitHub](#)

- Built a computer vision pipeline suitable for deployment in drone-based autonomous monitoring systems
- YOLOv8 segmentation for real-time landslide detection with image and video input, achieving 0.731 mAP@0.50
- Deployed application with risk classifications, Heat Maps and alert Messages for early hazard detection

SmartQ Generator – Multilingual NLP & TTS System using T5 [GitHub](#)

- Built multilingual NLP pipeline using T5 Transformer, automated question generation from text and speech inputs
- Integrated Speech-to-Text, language translation, and TTS modules for multilingual support
- Developed application with real-time question generation, editing, and PDF/TXT export features

AI Human Face Generation using WGAN-GP [GitHub](#)

- Developed a WGAN-GP based generative AI system using TensorFlow to generate realistic human face images from a custom dataset of 2,776 photographs.
- Achieved stable training without mode collapse or divergence through gradient penalty, data augmentation, hyperparameter tuning, and evaluation using loss curve analysis and an Inception Score of 1.522 and FID of 60.816.

WORK EXPERIENCE

AI/ML Intern — AyushLab [GitHub](#)

May 2026 – Present

- Developed an invoice parser to extract structured data from PDF, image, Excel, and CSV invoices using EasyOCR, Regular Expressions, Pandas, NLP and LLM integration
- Implemented hybrid approach By combining rule-based extraction with fallback
- Designed a standardized JSON pipeline to extract invoice headers, supplier/buyer details, line items, pricing, taxes, batch, expiry, and totals

- Designed validation logic to verify required fields, mathematical consistency, and generate review reports
- Created a modular backend architecture for future Inventory Master matching

Machine Learning Intern — FlyRankAI [GitHub](#)

july 2026 - August 2026

- Built machine learning baselines and content-refresh opportunity scoring using search-performance and historical click signals
- Performed data validation, feature analysis, leakage detection, and signal auditing on large-scale content-performance data
- Developed a transparent ranking and review pipeline, achieving 0.680 Precision@50 during evaluation
- Generated ranked review queues and conducted Top-20 human/error analysis to identify model errors and support content-refresh decisions

Technical Skills

- **Programming:** Python, C++, Java, SQL
- **Core CS:** Data Structures, OOP, DBMS, Operating Systems, Cloud Computing
- **AI/ML:** Machine Learning, Deep Learning, Reinforcement Learning, ROS2, Computer Vision, LLMs, RAG, NLP, Generative AI, Computer Vision, Object Detection, Image Segmentation
- **Frameworks & Libraries:** PyTorch, TensorFlow, Scikit-learn, Transformers, YOLOv8, OpenCV, NumPy, Pandas, OCR, Regex
- **Robotics:** ROS2, Autonomous Systems
- **Backend & Deployment:** FastAPI, REST APIs, Supabase, Docker, Cloud Deployment
- **Data & Tools:** Web Scraping, Data Preprocessing, Feature Engineering, Git, GitHub, Hugging Face, Jupyter Notebook, Google Colab, Roboflow
- **Databases:** MySQL, PostgreSQL, pgvector, Vector Embeddings

LANGUAGE PROFICIENCY

Japanese: Basic Proficiency — JLPT N5 Preparation; Guided by Professor Harikrishnan Bhat and Yasako Sato Sensei; Self-Learning

English : Full professional proficiency

Kannada: Native

Hindi : Professional working proficiency

WHY NIHON ?

As a student of Artificial Intelligence and Machine Learning, I want to develop my skills and gain more knowledge in technology. Since Japan is one of the leading countries in technology, innovation, and Artificial Intelligence, I have a strong interest in gaining more knowledge and skills in AI, robotics, automation, and innovation. This has attracted me toward Japan's tech culture and motivated me to build my future career there.

Beyond technology, it is also my dream. And I would say Japanese anime is the reason, the person who I am now. Growing up seeing anime, especially Doraemon and Pokemon gave me many life lessons and made me strong, believe in myself, and work hard. Also, I am attached to Japanese culture, want to live the culture, see and feel the nature and mountains, eat different delicious food,

and, most of all, live with lovely people. I just want to live my dream in real life. Also, living in Japan will help me learn the speak Japanese language more fluently.

Why This company?

I want to join Company because it gives me an opportunity to work on technologies that interest me, such as factory automation, computer vision, and intelligent systems. Through my AI/ML projects, I have developed an interest in building practical solutions using computer vision and machine learning, and I would like to apply these skills in real industrial environments while learning from experienced engineers.

Another reason I am interested in Company is my long-term goal of building my career in Japan. I have a strong interest in Japanese technology and engineering, and I am currently learning Japanese as part of my preparation. I believe working at Company will help me gain valuable industry experience, improve my technical skills, and better understand Japanese work culture while contributing to meaningful automation and AI projects.

EXTRACURRICULAR ACTIVITIES

- Rajya Puraskar Award – Bharat Scouts and Guides, recognizing leadership, discipline, and community service activities.
- Conducted technology awareness sessions for government school students, introducing them to basic technology and digital tools.

CERTIFICATIONS

- AI for Agriculture — Intel & Swayam Plus
- Model Context Protocol (MCP) — Anthropic
- Fundamentals of Artificial Intelligence — IBM
- Machine Learning with Python — Coursera
- Rajya Puraskar Award — Bharat Scouts and Guides
- Machine Learning Internship Certificate — EdiGlobe
